

Figure 10 is a line graph showing the variation of the normalized backscattering coefficient (y-axis) with incident azimuth (degrees) (x-axis). The x-axis ranges from 0 to 360 degrees, and the y-axis ranges from 0 to 1.0. The graph displays multiple curves corresponding to different tilt angles, ranging from 0 degrees to 10 degrees. The curves show a deep minimum around 90 degrees and a sharp peak around 180 degrees. The peak height increases as the tilt angle increases.
